

H1-B FACTS PRIMER AND QUERIES OF INTEREST

SAVE AMERICAN INFORMATION TECHNOLOGY
JOBS HAS THE H1-B FACTS

CAN YOU IMAGINE LOSING YOUR JOB TO A FOREIGN WORKER AND THEN TRAINING THAT INDIAN H1B WORKER AS YOUR REPLACEMENT? WE ASK ANYBODY READING THIS, HOW WOULD YOU LIKE IT?

The H1-B Facts divides H1-B Facts Queues into Congressional Districts, by state, by city and by employer. The queries reside all over the different states, Californians has a multiples of PDF queries. One also find out how many H1Bs are in a single building, by company name, and by city name. Observers are stunned when reading over this data.

Geo data is information about geographic locations that is stored in a format that can be used with a geographic information system, H1-B Facts uses latitude and longitude to sort other H1B data elements such as addresses into groupings based on the location determined by the latitude and longitude. This is a powerful feature that distinguishes H1B Facts from other H-1B database applications.

Viewing and researching H-1B data by congressional district is a good launching point from which to examine the impact of H-1B employees within a congressional district workplace. It allows data analysts to get a feel for which area of a given state has the distribution of H-1B employees and determine it's impact. Worksite Latitude Longitude which when sorted ascending points to a group by an address, then one can examine all the H-1Bs working at that address in that neighborhood or surrounding geographical location.

Aggregate SQL functions are used with the GROUP BY clause of the SELECT statement.

H1B Fact Data Definition: An "H-1B Dependent Employer" is a U.S. employer that hires a higher amount of H-1B employees than the normal standard.

Example of a congressional district:

The data from h1bfacts.com is accumulated from the form https://www.foreignlaborcert.doleta.gov/pdf/ETA_Form_9035.pdf. Check section B-7 on the front page of the form for Total Workers.

What is the difference between "total visas" vs. "total workers" in the H1B Facts report?

Example for Connecticut

Total Visas: 7173

Total Workers: 15251

Total Workers / H-1B Dependent Employers: 7317

It is a misnomer for one would think that a one-to-one relationships would exist for an individual H1B Visa holder and the total worker number; thus "total visas" and "total workers" should be the same number.

They do not for the employers work several individual H-1Bs for a H1B visa application; thus one visa may be used for multiple workers; thus the difference between the two total on the H1B Facts report.

On the LCA ETA form the visa the arrowed image. Total Workers requested for certification.

a. New employment *

b. Continuation of previously approved employment * without change with the same employer

c. Change in previously approved employment

d. New concurrent employment *

e. Change in employer *

f. Amended petition

It is the total workers that are used to determine the actual number of H-1B's that reside in the various office work site locations.

A more governmental write up is as follows:

The H1B visa shall maintain a one to one relationship as a subject person. The visa shall be treated as a passport, the identity of the person in form of a picture and visa immigration number.

Current LCA visas have a potential of one-to-many set of visas that are interchangeable as employers work several individual H-1Bs for a H1B visa application; thus one visa may be used for multiple workers. The system shall eliminate this practice; a strict-one to one H1B Visa shall be created, maintained and not changed.

Employment changes such as new employment, continuation of previously approved employment, change in previously approved employment, new concurrent employment without change with the same employer, change in employer and amended petition shall be instituted for that visa person and that visa only. For every H1B visa there one worker and one work site address location with latitude and longitude coordinates.

A singular visa will eliminate fraud and abuse of the multi-interchangeable LCA visas, The total number of visas shall equal the total number of workers on LCA reports, It is the total workers and a one-to-one visa relationship to determine the actual number of H1Bs that reside in the worksite location.

Important Note: This public disclosure file contains administrative data from employers' Labor Condition Applications (ETA Forms 9035 & 9035E) and the certification determinations processed by the Department's Office of Foreign Labor Certification, Employment and Training Administration where the date of the determination was issued on or after October 1, 2017, and on or before September 30,

2018. All data were extracted from the Office of Foreign Labor Certification's iCERT Visa Portal System; an electronic filing and application processing system of employer requests for H-1B nonimmigrant workers.

Additional data was obtained by filing various FOIA (Freedom of Information Act) requests and using data obtained from those and other FOIA requests are from the US Department of Labor. The key data obtained is labeled Worksite Address, a set of data elements that identify the physical location in and or for latitude and longitude pin points.

After compiling and merging the above mentioned data, latitude, longitude, and congressional district data was approximated by geocoding the worksite and employer addresses provided by the US Department of Labor.

Geocoding was performed by using various geocoding resources including:

<https://usgeocoder.com/>

<https://www.latlong.net/>

<https://tools.usps.com/zip-code-lookup.htm?byaddress>

<https://developer.mapquest.com/>

<https://msdn.microsoft.com/en-us/library/ff701713.aspx>

<https://developers.google.com/maps/documentation/geocoding/intro>

Geocoding is the process by which latitude and longitude values are approximated from street address, city, state, zip code information.

H1-B Facts uses geodata technology that is similar to google maps and others.

H-1B Facts for the State of Connecticut - Summary and Totals of H-1B Occupations for the Year 2017 - What You See is What You Get in the in the H-1B Conned State -

H-1B Facts has developed a Summary Report that displays all the 11755 H-1B visas in the state of Connecticut, its occupations, its counts and its percentages.

Senator Christopher Murphy (D-CT) is a member of the Senate India Caucus

Connecticut has no Senator who has endorsed Senate Bill #S281: Fairness for High-Skilled Immigrants Act of 2017 as a Co-Sponsor.

All of the Connecticut House members have endorsed House Bill H.R. 392 - Fairness for High-Skilled Immigrants Act of 2017 as a Co-Sponsor in the House of Representatives.

H-1B Visa Workers numbers in Connecticut is astoundingly high being that the state is known as an finance and insurance hub. A considerable number of companies, 7317, are totally dependent of H1-B labor as H-1B Dependent Employers. Who knows the number of H1-Bs that reside in companies that are NOT H-1B Dependent Employers? An astounding 15251 entered Connecticut in 2017 alone.

Total Visas: 7173

Total Workers: 15251

Total Workers / H-1B Dependent Employers: 7317

One must assume a very widespread population of H-1B workers is not spread out through out the entire state of Connecticut. Most likely H-1B population is in the mid sized cites like Bridgeport. New Haven. Hartford. Stamford. Waterbury. Norwalk. NS Danbury.

Wage Levels indicate that the vast majority are entry level or qualified, depriving STEM grads and junior level programmers of job opportunities, clearly evident. If you are a STEM grad in computers, your chances are ZERO for job placement. Fully competent H1-Bs in Connecticut is strikingly low in view that Connecticut is an insurance state, but only represents 4.49% of total.

Level I (Entry Level): 5627

Level II (Qualified): 5147

Level III (Experienced): 1457

Level IV (Fully Competent): 685

H1-B Labor is not cheap in H-1B Connecticut, if the entry level median salary is \$67,496.00 with the median is defined as half of the population is less and half the population is greater, thus many

many salaries are below the median \$67,800.00. The median for qualified is \$80,267.00, a high number. One wonders are people can survive in an expensive location like Connecticut. It is H-1B bunk bed time the shitty apartments that abound.

Total Level I (Entry Level) ▶ Count ▶ 5627 / 36.9%

▶ Mean Wage ▶ \$69,090.43 ▶ Median Wage ▶ \$67,800.00

Total Level II (Qualified) ▶ Count ▶ 5147 / 33.75%

▶ Mean Wage ▶ \$82,087.41 ▶ Median Wage ▶ \$80,267.00

Total Level III (Experienced) ▶ Count ▶ 1457 / 9.55%

▶ Mean Wage ▶ \$103,411.58 ▶ Median Wage ▶ \$96,000.00

Total Level IV (Fully Competent) ▶ Count ▶ 685 / 4.49%

▶ Mean Wage ▶ \$126,681.22 ▶ Median Wage ▶ \$112,258.00

Total Unspecified Level ▶ Count ▶ 2335 / 15.31%

▶ Mean Wage ▶ \$87,435.31 ▶ Median Wage ▶ \$83,000.00

CONCLUSION: Approximately 65% of the H-1B jobs are Information Technology Related. The rest of the H-1Bs are in other occupations. The number of occupations is staggering and the visas are spread out in ones and twos and threes and eights and tens. H-1Bs are not just for IT, all other occupations are affected, in Connecticut many engineering, accountants, finance and medical professions are H-1B occupied. A recent Pew report stated. "Bridgeport, Connecticut, had the highest average salary (\$100,200) of any metro area,".

ANESTHESIOLOGISTS ► Count ► 6 / 0.04% ► Median Wage ► \$265,200.00

PHYSICISTS are not loved in Connecticut; last I checked one had to be very smart, Median Wage of \$60,000.00? Some STEM American is has no incentive to become a PHYSICIST. H-1B ANESTHESIOLOGISTS clock in at \$265,200.00 - R U SERIOUS?

Who can forget the scene on February of 2016 when Northeast Utilities in Connecticut H-1Bers' employees who hung "Small American flags were placed in cubicles and along the hallway in silent protest -- flags that disappeared as the workers were terminated". "Sen. Richard Blumenthal (D-Conn.) co-sponsored legislation in January 2015 that would hike the 65,000 H-1B base cap hike to as high as 195,000. The measure, known as the I-Squared Act, left some of the former utility IT employees incredulous." Little wonder the Indian get paid so well in Connecticut, the entire congressional delegation supports the S.386 Green Card Giveaway.

Ohio

The 26,971 H-1B Visa Workers in Ohio is astoundingly high being that the state is not known as a tech hub, the state has many companies associated with industrial distribution, insurance, other back office industries. A staggering number of companies, 12,605 are totally dependent of H1-B labor as H-1B Dependent Employers. Ohio always gets the shaft.

H-1B Visa Workers numbers in Ohio is astoundingly high being that the state is not known as a tech hub, the state has many companies associated with industrial distribution, insurance, other back office industries. A staggering number of companies, 12,605 are totally dependent of H1-B labor as H-1B Dependent Employers. Who knows the number of H1-Bs that reside in companies that are NOT H-1B Dependent Employers?

Total Visas: 13688

Total Workers: 26971

Total Workers / H-1B Dependent Employers: 12605

Considering the number of employers and total workers, research into the actual number of cities to house these H1-B workers is per wiki "Cities in Ohio are incorporated municipalities whose population is greater than 5,000. Smaller municipalities are villages. Nonresident college students and incarcerated inmates do not

count towards the city requirement of 5,000 residents. There are currently 247 cities in Ohio, a state located in the Midwestern United States.”

One must assume a very widespread population of H-1B workers spread through out the entire state of Ohio. Additional research needs to be obtained for the major cities like Cleveland, Columbus and Cincinnati to determine its density compared to the rest of the state.

Wage Levels indicate that the vast majority are entry level or qualified, depriving STEM grads and junior level programmers of job opportunities, clearly evident. Fully competent H1-Bs in Ohio is more apparent in view that Ohio is an advanced industrial state, but only represents 8.78% of total.

Level I (Entry Level): 6976
Level II (Qualified): 8916
Level III (Experienced): 3218
Level IV (Fully Competent): 2368

H1-B Labor is cheap in the Rob Portman’s opioid Ohio, if the entry level median salary is \$60,320.00 with the median is defined as half of the population is less and half the population is greater; thus many many salaries are below the median \$60,320.00 .
